1. Introduction

The system is designed to support customer care teams by enabling proactive and efficient customer management focused on improving overall customer satisfaction and maintaining a high Net Promoter Score (NPS). Its primary purpose is to immediately notify responsible agents or supervisors whenever indicators suggest that a customer is missing important support, services, information, or experiences a decline in satisfaction that could negatively impact the NPS score.

By continuously monitoring relevant customer data and satisfaction indicators, the system allows support teams to identify potential issues at an early stage and react before customer dissatisfaction escalates further. This helps reduce response times, improve service quality, and strengthen long-term customer relationships.

In addition to real-time notifications, the system also provides integrated improvement actions that can be selected and executed automatically directly within the platform. These actions may include automated customer outreach, personalized follow-ups, support measures, escalation workflows, reminders, or other targeted customer engagement activities aimed at improving the customer experience and increasing the NPS score.

Through its combination of intelligent monitoring, automated recommendations, and immediate action capabilities, the system ensures a more proactive, data-driven, and customer-oriented approach to customer care. Its overall goal is to support teams in delivering optimal customer treatment,

increasing customer loyalty, and continuously improving customer satisfaction levels.

2. Purpose of the Documentation

This documentation is intended to provide customer care agents and supervisors with a clear understanding of how to use the dashboard effectively and efficiently in their daily work. It explains the structure, features, and functionality of the system and guides users through the different tools and actions available within the platform.

The documentation describes how to navigate through the dashboard, monitor customer satisfaction indicators, interpret NPS-related information, and respond to notifications and alerts. It also explains how users can identify customers who may require additional support or immediate attention and how improvement measures can be selected and executed directly through the system.

In addition, the documentation provides step-by-step instructions for the most important workflows and explains the available automation features, customer interaction options, and escalation processes. Its purpose is to ensure that all users are able to operate the dashboard confidently, react quickly to customer needs, and make full use of the system's capabilities to deliver optimal customer support and improve overall customer satisfaction.

3. System Requirements

To use the system properly, users need a stable internet connection and a supported web browser such as Google Chrome, Microsoft Edge, Mozilla Firefox, or Safari. It is

recommended to use the latest browser and operating system versions to ensure optimal performance and security.

Users also require valid login credentials and the necessary access permissions to access the platform and its features.

4. Dashboard

The screenshot displays the 'Space Flight Experience Management' dashboard. At the top, it shows 'Advisor Dashboard' and 'Selected Advisor: Klara Fall'. On the right, there's a 'Company NPS' score of 50 and buttons for 'Simulation Setup', 'Incidents', and 'All Clients'. The main content is divided into three sections:

- Assigned Customers (Left):** A list of customers with their details and status. Red box 1 highlights the first customer, Robin Hartmann1 (VIP), and red box 2 highlights the second customer, Robin Keller5 (GOLD).
- Customer Detail: Sam Fischer3 (Center):** A detailed view of a customer's profile, including their package type (VIP), status (ONBOARDING), customer type (NORMAL), CV Score (40.0), and flight information (SIM-0003 on 2026-06-23). Red box 3 highlights the customer's name. Below the profile, there are sections for 'Customer Profile', 'Add Advisor Note', and 'Advisor Notes'.
- Decision Support (Right):** A section for decision support, currently showing 'No active incidents for this customer.'

Red boxes 1, 2, and 3 are used to highlight specific elements in the dashboard for reference.

4.1 Passenger Information

On the left side, the supervisor can see who the customers are and what their status is (1). It also shows whether everything is going well or if there are any complaints (2). In the middle, you

can see information about the flight details and the passengers (3). In the top right corner, you can choose whether to view all clients or only those who are negatively impacting the NPS score (4).

4.2 Incidents

As shown here, with “Incidents” (5) selected in the upper right corner, only those passengers who have a negative impact on the NPS score are now displayed. In the center, below the passenger’s personal data, you can see what type of problem or complaint it is in a box marked in red (6). On the right side, you can see suggestions for resolving this problem as it relates to the NPS score in a green box (7). So, you can see what the expected impact on the NPS will be if the agent carries out the suggested action.

4.3 Incident Response

Here you can see what happens when the consultant clicks on the suggestion (8). A window appears with a pre-generated email promising the customer a gift to boost the NPS score

(9).

→ Here you can see the same thing, it's just the other suggestion that the consultant receives.

4.3 Customer Journey

When the advisor clicks the “Open current flight itinerary” button (11), they are presented with an overview showing the current status of the trip, which activities have been completed,

which are in progress, and which are still pending. These are color-coded in green and yellow. The advisor can also view the person's flight details and add their own notes to save information (f.e.: favorite sports game/ favorite watch) of the passengers to better choose the best recommendation mail. You can also see the Mail Incentives for each incident to better react to the following incidents.

The screenshot displays a user interface for flight details. At the top, there is a 'Back' button and the title 'Flight Detail: EM1001' with the passenger name 'Marie Lilienthal' and the date '2025-11-03'. Below this, the 'Flight Summary' section lists: Customer: Marie Lilienthal, Flight number: EM1001, Flight date: 2025-11-03, Booking date: 2025-10-10, Package: GOLD, and Flight status: COMPLETED. The 'Flight Feedback' section shows a submission date of 2026-02-13 12:41, an overall score of 8.0, customer satisfaction of 8, and a referral score of 9. Under 'Feedback Items', there are three entries: FLIGHT (Score 8) with the comment 'Smooth flight, excellent crew service.', HOTEL (Score 7) with 'Hotel accommodation was comfortable and well-organised.', and FOOD (Score 9) with 'Catering was exceptional.'

Flight Summary	
Customer:	Marie Lilienthal
Flight number:	EM1001
Flight date:	2025-11-03
Booking date:	2025-10-10
Package:	GOLD
Flight status:	COMPLETED

Flight Feedback	
Submitted:	2026-02-13 12:41
Overall score:	8.0
Customer satisfaction:	8
Referral score:	9
Feedback Items	
FLIGHT:	Score 8 Smooth flight, excellent crew service.
HOTEL:	Score 7 Hotel accommodation was comfortable and well-organised.
FOOD:	Score 9 Catering was exceptional.

4.4 Flight details

Here you can view detailed flight information after pressing on “View Flight” Button in the Customer Journey and see what feedback the flight received. **(12)**

5. Main Functions

The main function is to provide the consultant with a comprehensive overview of all customers, including customer data and associated flight data. An important function of the dashboard is to identify issues during the flight that negatively impact the NPS score. This involves not only identifying but also directly addressing the negative impact on the NPS with suggestions that can be implemented immediately by the consultant with a single click. This is done by automatically generating and sending emails. The goal is therefore to improve customer feedback and the NPS score in this regard.

6. Processes

Passengers are experiencing issues that negatively impact the NPS score. The agent is notified of these issues and can respond immediately to help bring the NPS score back into the positive range.

7. Roles and Permissions

Each agent has the authority to view the current stage of the journey for their directly assigned passengers, any issues they may be experiencing, as well as all personal and flight details. Armed with this information, they are then authorized

to improve the NPS score by sending automatically generated solution suggestions via email.

8. FAQ

Does the consultant have to accept the suggestions?

➔ No, but it is recommended because otherwise the NPS score will drop

By how much does the NPS score improve when the suggestion is accepted?

➔ It depends on the gift in question, but you can always see what the expected increase in NPS is going to be

What is the NPS Score?

➔ **NPS (Net Promoter Score)** is a customer loyalty metric that measures how likely customers are to recommend a company, product, or service to others.
