

Customer segmentation

Analyse Customer Feedback

Disclosure: AI was used to create a structure for the manually created personas and process. Task 7 in the BPMN was rephrased by AI.

Personas

External Personas

Rainer Zufall

- Gender: Male
- Education: PhD in Science
- Profession: Scientist at Harvard
- Age: 45
- Experience: Expert
- Expectations to the trip: Make new scientific discoveries
- Goals and Motivation: Discovering new scientific insides
- Barriers and Frustration: Limited budget
- User Story: As a scientist I want a set advisor that can answer all of my questions
- Relevance: Depicts one of our basis costumers
- Relevance of BPMN: Showcase the standard package

Marie Lilienthal

- Gender: Female
- Education: PhD in Business, MBA
- Profession: CEO of a global Pharmacy business
- Age: 48
- Experience: basic Training
- Expectations: Extraordinary experience
- Goals and Motivation: Standing out and get the extra kick
- Barriers and Frustration: Limited time, Hard to impress
- User Story: I have limited time and therefore don't want to replay to hundreds of mails
- Relevance: Depicts an adventures and therefore typical costumer
- Relevance of BPMN: Showcase the gold package

Amala Nguyen

- Gender: Female
- Education: MBA in Finance
- Profession: Private Equity Partner
- Age: 60
- Experience: Advanced Training
- Expectations: The ultimate adventure
- Goals and Motivation: Getting a once-in-a-lifetime experience
- Barriers and Frustration: Control freak, Privacy above all

- User Story: As an older customer that values privacy above all, I want an exclusive and high-quality treatment at the pickup
- Relevance: Depicts a customer that wants to be included in the process
- Relevance of BPMN: Showcase the VIP package

Internal Personas

Klara Fall

- Gender: Female
- Education: B.A. in Customer Management
- Profession: Customer Advisor at Orbit
- Age: 24
- Experience: Limited
- Expectations: Support throughout the entire process
- Goals and Motivation: Giving customers the best support
- Barriers and Frustration: Young, lack of experience
- User Story: As a young advisor, I need support when making decision and a transparent way to display them
- Relevance: Depicts the main user of the software
- Relevance of BPMN: Showcase the main user

Tom Mayor

- Gender: Male
- Education: B.A. in Data Analytics
- Profession: Customer advisor Analytic Specialist at Orbit
- Age: 34
- Experience: moderate
- Expectations: A solid database
- Goals and Motivation: Proactively shaping the program and customer experiences
- Barriers and Frustration: False or no data
- User Story: As an analyst, I need a clear and reliable database
- Relevance: Depicts an additional benefit of our software: Giving analytical insights, though he is more important for the outlook
- Relevance of BPMN: Showcase the use of the data collected in the feedback form

Jeff Musk

- Gender: Male
- Education: PhD in Strategic Management
- Profession: Chief Service Officer (CSO) at Orbit
- Experience: Advanced
- Expectations: Reaching high customer satisfaction
- Goals and Motivation: Highly independent teams
- Barriers and Frustration: Operating in difficult market
- Barriers and Frustration: False or no data

- User Story: As CSO, I only care about the serious incidents and not all issues
- Relevance: Depicts the management level benefit of our software; giving an overview of the business with not too many details
- Relevance of BPMN: Solves serious problems in the process, like hiring a new advisor

BPMN

1. Purpose of the Process

The process models the workflow of an advisor at Orbit, including the initial contact, Pre- and Flight support and finally the customer feedback and the reaction handling.

2. Scope

Included:

- Contact form
- Forwarding to booking
- Customer Segmentation
- Onboarding Incident: Booking is unsuccessful to onboard the customer in 3 weeks
- Handling incentives to returning customers
- Health Incident: Handling eligible and ineligible health statuses
- Advisor Incident: Handling when the advisor suddenly becomes unavailable
- Delay Incident
- Send and analyze customer feedback

Excluded:

- Booking Process
- Onboarding process
- Flight preparation: Training, Health checks,...
- Flight Logistics: Pick up and Transportation back

3. Participants/ Pools and Lanes

- Booking Team: Was used to showcase the main actor in a task advisor only support and to showcase the source of some customer data
- Chief Service Officer: Was used to handle incidents on a management level
- Flight Preparation Team: Was used to showcase the main actor in a task advisor only support and to showcase the source of some customer data
- Flight Logistics: Was used to show the responsibility of the transportation of the customer
- Boarding Crew: Was used to show the responsibility of the take-off of the customer
- ERP-System and Customer Dashboard: Were used to show where the data is being stored and transformed to give the advisors support

4. BPMN Elements Used

Activities:

Task	Are activities that represent individual steps in the process
Closed sub-process	Represent collapsed details for one task within multiple steps

Gateways

Exclusive Gateway	Are used when several conditions are mutually exclusive and only one selection is possible
Parallel Gateway	Activate all outgoing branches simultaneously. They wait for all incoming branches to be completed before continuing the sequences flow

Roles and artefacts:

Data object	Represents files or documents, which are used to complete activities
IT Systems	Represent certain systems, which are utilized to execute the activities

Data Objects

Data Object	
Database	
Message	Used to depict the contents of a communication between two participants

events

Start	Can be used for every type of start, end events, or milestones
Message	Symoblizes interactions with external entitles- black represents outgoing, with incoming
Time	Shows either a specific moment or the passing of a deinfed duration

Connectors

Associations	Combine data objects and artifacts with other elements
Sequences flows	Connect events, gateways, tasks and subtasks
Messages flows	Represents communication and interactions between pools

5. Process Flow Explanation (Without Incients)

- 1) Customer request an appointment for a group meeting

- 2) Group meeting
- 3) Booking
- 4) Customer Segmentation
- 5) Allocating SPoC
- 6) Onboarding
- 7) Incentives for returning customers
- 8) Flight Preparation
- 9) Flight
- 10) Request Feedback
- 11) Analyze Feedback

6. Business Rules

Customers may reschedule appointments up to five times. After exceeding this limit, the process ends with a failure state.

Customers may reject health suggestion up to 3 times.
After exceeding this limit, the process escalated.

7. Limitation and future Outlook

The current system implementation does not yet fully integrate several operational processes. Existing limitations include:

- Booking process management
- Customer onboarding process
- Flight preparation activities such as training sessions and health checks
- Flight logistics including customer pick-up and return transportation

These processes are currently handled separately or only partially supported within the system environment.

Future development should focus on intensifying the incorporation of AI to improve system recommendations and automate decision-making processes. Additionally, the implementation of an analysis dashboard would enable better data visualization and operational monitoring.

Another important objective is the integration of all business units into a unified information ecosystem to improve communication and process transparency. The integration of external sources could further support the development of a worldwide intelligence system.

Finally, AI and machine learning technologies could be used for advisor allocation and process optimization, enabling more efficient customer management and personalized service experiences.
